

CRUISE REPORT:

(Updated APR 2022)

Highlights

Cruise Summary Information

Section Designation	MF-09-04_3		
Expedition designation (ExpoCodes)	31FN20090924		
Chief Scientists	William Floering NOAA/PMEL		
Dates	2009 SEP 24 - 2009-OCT-05		
Ship	RV <i>Miller Freeman</i>		
Ports of call	Dutch Harbor, AK		
Geographic Boundaries	59.98 -178.2 55.36	-163.28	
Stations	120		
Floats and drifters deployed	0		
Moorings deployed or recovered	19		

Contact Information:

**CRUISE REPORT
MF-09-04 LEG II
NOAA Ship Miller Freeman
21 Sept. -13 Oct., 2009**

Area of Operations: Bering Sea - Dutch Harbor to south of St. Lawrence Island

Itinerary: Sept. 19-21 Load and prep for cruise. Sept. 22nd Depart Dutch Harbor. 13 Oct. End Cruise in Dutch Harbor, AK.

Participating Organizations:

NOAA – Pacific Marine Environmental Laboratory
7600 Sand Point Way N.E., Seattle, WA, 98115

NOAA – National Marine Mammal Laboratory
7600 Sand Point Way N.E., Seattle, WA. 98115

NOAA – Alaska Fisheries Science Center (FOCI)
7600 Sand Point Way N.E. Seattle, WA. 98115

Univ. of Alaska Fairbanks (UAF)
200 O’Neill, Fairbanks, AK. 99775-1080

U.S. Fish and Wildlife Service Migratory Bird Mng.
1011 E. Tudor Rd., Anchorage AK. 99503

Penn. State University, Applied Research Laboratory
P.O. Box 30
State College, PA 16804

Pohang University of Science and Technology
School of Environmental Science and Technology
Pohang Korea, 790-784

Chief Scientist: William Floering
NOAA/PMELOERD-2
206-526-6480
William.Floering@noaa.gov

Participating Scientists: Samuel Denes, Penn. State Univ.
Aaron Lang, U.S. Fish and Wildlife
Daniel Naber, Univ. of Alaska Fairbanks
Jessica Cross, Univ. of Alaska Fairbanks
Carol DeWitt, NOAA/PMELO
Jay Clark, NOAA/AFSC.RACE

Participating Scientists: Chrissy Jump, NOAA/AFSC/RACE
(cont.) Steve Porter, NOAA/AFSC/RACE
Lisa Deforest, NOAA/AFSC/RACE
Hyun-Cheol Kim, School of Envir. Science, Korea
Dr. Peter Proctor, NOAA/PMEL

Cruise Objectives: The continuation of a long term time series designed to describe the physical and biological characteristics of the Bering Sea shelf between Dutch Harbor and St. Lawrence Island. Methods include the recovery and deployment of several oceanographic instrumentation moorings, CTD casts, Bongo Tows, ADCP and shipboard metrological data collection.

Summary of Operations and Samples Collected:

20 cm bongo tows	67
60 cm bongo tows	67
CalVet vertical tows	12
Seabird SeaCat data files	80
Seabird CTD casts	132
Moorings deployed and recovered	19
Salinity samples	121
Dissolved Oxygen samples	
Dissolved Organic Carbon	333
Dissolved Inorganic Carbon	326
Nutrient Samples	898
Seawater ph samples	340
Seabird observations (hours on effort)	68

Cruise Summary:

We were fortunate to have the opportunity to load some of the mooring equipment aboard the Miller Freeman late August, prior to their departure from Seattle. The remainder of the equipment needed for this cruise was shipped to Dutch Harbor via Horizon lines in a 40 foot container. Prior to loading the ship in Dutch Harbor the fishing nets and trawl doors from the previous cruise were offloaded to clear deck space for the mooring equipment. The AFSC items along with other fisheries equipment in storage at OSI were loaded onto a flat and shipped to Seattle via Samson Lines shipping. I was able to include our BSM-4 surface mooring float and tower on this shipment south. For review, the surface mooring at site BS-4 was scheduled for recovery on this Freeman mooring cruise. Sometime after BSM-4A was deployed in the spring of 2009, the ice advanced and moved the mooring approximately 4 miles south east and into shallower water. The change in water depth allowed to the release to drag on the bottom. Eventually a portion of the release that holds the release link failed and the mooring

started to drift. The Oscar Dyson was in the area and agreed to recover the mooring and place it in storage at OSI in Dutch Harbor.

The instruments from this mooring were loaded aboard the Miller Freeman prior to the Sept. mooring cruise.

With several distinct sampling protocols scheduled for this cruise, laboratory space was tight. Set up time took a little longer than anticipated and there were some issues with U.S. vs European power requirements for some of the equipment. In addition I would like to thank the Command of the Miller Freeman for opening up an extra bunk allowing us to include the sea bird observer from the U.S. fish and wildlife Service.

Loading was completed and we were scheduled to depart Dutch Harbor the afternoon of Sept. 22nd. A member of the science party neglected to confirm the date of their last TB test. Their test expired a week prior to the cruise, a new TB test was given by the Dutch Harbor medical clinic. We were required to remain in Dutch Harbor an extra day to meet the 48 hour injection to read time required by NOAA. Unfortunately waiting that extra day allowed time for the first of many storms to catch us so an additional day was spent on anchor in Dutch Harbor. Around 6:30am on Sept. 24th we pulled anchor and headed for our first mooring recovery.

On the afternoon of Sept. 24th mooring 09-BSP-9A was recovered. This is an ADCP mooring deployed for AFSC FOCI division. The second ADCP mooring in this group of 2 was trawled up by the F/V Nordic Star and dropped off in Dutch Harbor earlier in the year.

Due to high winds and high seas the ship steamed slowly to mooring site BS-2 arriving at the morning of Sept. 25th. We completed CTD and bongo sampling around the mooring site before beginning mooring operations at daylight that afternoon. First out of the water was mooring 09-BSP-2A. Next mooring recovered was 09-BST-2A, the TAPS mooring. Moorings 09-BSP-2B and 09-BS-2C were deployed prior to recovery of the surface mooring. Once the seas calmed down a bit surface mooring 09-BSM-2A was recovered late on Sept. 25th. We completed the box of CTD/bongo stations around mooring site BS-2 then made our way up the 70 meter depth contour completing CTD and bongo casts at the designated stations. We arrive at the mooring site BS-4 at noon on Sept. 27th.

Because the surface mooring originally at site BS-4 had drifted and was recovered earlier by the Oscar Dyson only mooring 09-BSP-4A was left to recover at site 4. Moorings 09-BSP4B, 09-BS-4B and 09-BSIP-4B (the ice thickness mooring) were successfully deployed at this site.

We finished the CTD/bongo combination at the remaining 2 corner stations at BS-4 and proceeded north along the 70 meter contour with CTD casts and bongo tows.

At 1100 Sept. 29th we arrived at the BS-5 mooring site. Moorings 09-BS-5A and 09-BSP-5A were successfully recovered. Moorings 09-BS-5B and 09-BSP-5B were successfully deployed.

The CTD/Bongo corner stations were completed before working our way north again along the 70 meter contour to mooring site BS-8. Arriving on site at sunrise Oct. 1st, moorings 09-BSV-8A, 08-BSP-8A and 08-BS-8A were recovered. The top break away temperature sensor was missing from mooring 09-BSV-8A. This mooring was deployed in Aug. and designed for shallow depth temperature data. Since the temperature sensor is at 15 feet depth or less it's not unexpected to have the top sensor missing due to an

interaction with a ship's propeller. Moorings 09-BSP-8A and 09-BS-8A were deployed without issue and will remain on site for one full year.

The work at mooring site BS-8 concludes the mooring activities scheduled for the Bering Sea segment of this cruise. In spite of having several days with less than acceptable working weather all scheduled mooring recoveries and deployments were complete. The cruise plan mapped out CTD/Bongo stations on lines running through each of the historic Bering Sea mooring locations (BS-2,BS-4,BS-5 and BS-8) and perpendicular to the 70 meter isobath. Due to time lost to weather we were able to complete 3 of the 4 scheduled station lines.

On 3 Oct. we started the SL line of stations running perpendicular to mooring site BS-8. This line of 14 stations was completed on the afternoon of Oct. 4th.

Following a few hour transit, late on Oct. 4th, we started the CTD/bongo sampling along the MN line running perpendicular to mooring site BS-5. This line of 18 stations on the MN line were complete on Oct. 6th around noon.

Due to time limitations and prioritizing the line through mooring site 4 was skipped and we steamed to the start of the CN line transecting mooring site BS-2. 23 CTD/Bongo stations were completed along the CN line. With a few hours left on the clock the CN line was extended past the shelf break picking up several 1500 meter CTD casts.

The final CTD cast for the Bering Sea segment of this cruise was completed the morning of Oct. 10th. The Freeman steamed to Dutch Harbor for an overnight in-port Oct. 10/11. All Science party members with the exception of Wm. Floering disembarked in Dutch Harbor and the vessel took on fuel. Oct. 11th the Freeman left Dutch Harbor steaming to a mooring recovery in Pavlof Bay.

Mooring 08-PA-1A was recovered and mooring 09-PA-1A was successfully deployed on Oct. 12th. Calibration CTD casts were taken prior to recovery and following deployment. From Pavlof Bay were set a course for Chiniak Bay near the town of Kodiak, AK. Early evening of Oct. 14th we arrived at the Chiniak Bay mooring site. Mooring 09-CB-1A was recovered and mooring 09-CB-2A was successfully deployed. Once again calibration CTD casts were completed prior to recovery and following the new mooring deployment. The Oscar Dyson was in Kodiak and offered to send their small boat out to Chiniak to pick me up, saving the Freeman from having to navigate into Kodiak and tie up. I was picked up and dropped at the pier around 10pm the night of Oct. 14th. On Oct. 15th I flew to Seattle.

For GMT times and positions for all moorings and other operations see the corrected MOA Excel file.

All mooring and scientific equipment remained on the Miller Freeman for transport to Seattle. The Freeman tied up at Federal Center South in Seattle. Equipment was off loaded and taken to NOAA Sand Point by OERD-2 personnel.

Issues and Observations:

As expected this time of year, we endured a number of pre-winter storms with winds in the 35-50 knot range. It's difficult to calculate the exact number of days or hours lost to weather because the weather impacts transit time and scheduling of operations as well as discontinuing operations when conditions dictate. Due to the failure of the centerboard acoustic release transducer the search for a missing mooring at site BS-2 was canceled.

Seems every cruise we experience the same difficulties with the computer generated SCS station record keeping. For what ever reason the correct buttons and/or annotations are not being entered by the bridge staff and the appropriate people are not notified when the system locks up. The SCS MOA is the primary record for location, time and conditions for each CTD, Bongo, mooring or any other important event. If the events are not documented correctly someone has to invest a number of hours to reconcile the mistakes and omissions. This year the Chief Survey Technician corrected the mistakes.

Overview of Ancillary and Cooperative Projects:

U.S. Fish and Wildlife Service, represented by Aaron Lang for Migratory Bird Management. The seabird and marine mammal observation data will be archived in the North Pacific Pelagic Seabird database.

Observations were from the bridge port side using 8x binoculars during daylight hours. Observation field was a 300 meter, 90 degree arc from the bow to mid ship.

Alaska Fisheries Science Center/RACE/FOCI represented by Jay Clark, Chrissy Jump, Steve Porter and Lisa DeForest. Continuation of the time series study of zooplankton and phytoplankton distribution and abundance in the eastern Bering Sea coupled with chlorophyll sampling from the underway seawater sampling system and from the CTD bottle casts. Vertical CalVet tows, 60cm and 20cm bongo tows were the primary sampling devices. 333 micron nets for the 60 cm bongo, 153 micron nets for the 20 cm bongo and 53 micron nets in the CalVet.

Pohang University of Science and Technology, Puhang South Korea, represented by Hyun Cheol Kim. From the CTD bottle casts Mr. Kim was sampling seawater pH (total alkalinity) dissolved organic carbon and dissolved inorganic carbon.

Pennsylvania State University, Miksis-Olds Acoustic Laboratory represented by Samuel Denes. Mr. Denes maintained passive and active acoustic sensors deployed at our mooring sites BS-2 and BS-5 to observe the cumulative and synergistic effects of biological, physical and acoustical signals on marine mammal habitat use. The passive acoustic devices (PALs) adaptively subsample the acoustic environment of the Eastern Bering Sea. The Acoustic Water Column Profilers (AWCP) arrays use active acoustics to characterize zooplankton concentrations at each of the selected mooring locations.

University of Alaska Fairbanks, represented by Jessica Cross and Daniel Naber. Jessica Cross collected dissolved organic and dissolved inorganic water samples from the CTD bottle casts. Daniel Naber set up and maintained the ISUS nutrient sampling instruments attached to a number of the Bering Sea mooring string.

Table of Operations (Times and Positions):

Station Name	Station/Haul	Activity	Depth (m)	Transit (hrs)
